1. Network Login

1.1 Microsoft Internet Explorer (IE)

Open Microsoft Internet Explorer (IE) and input DVR/IPC/NVR's IP address. Following is the main login screen when IE connected to DVR/IPC/NVR.

- The default user is "Admin" and has no password

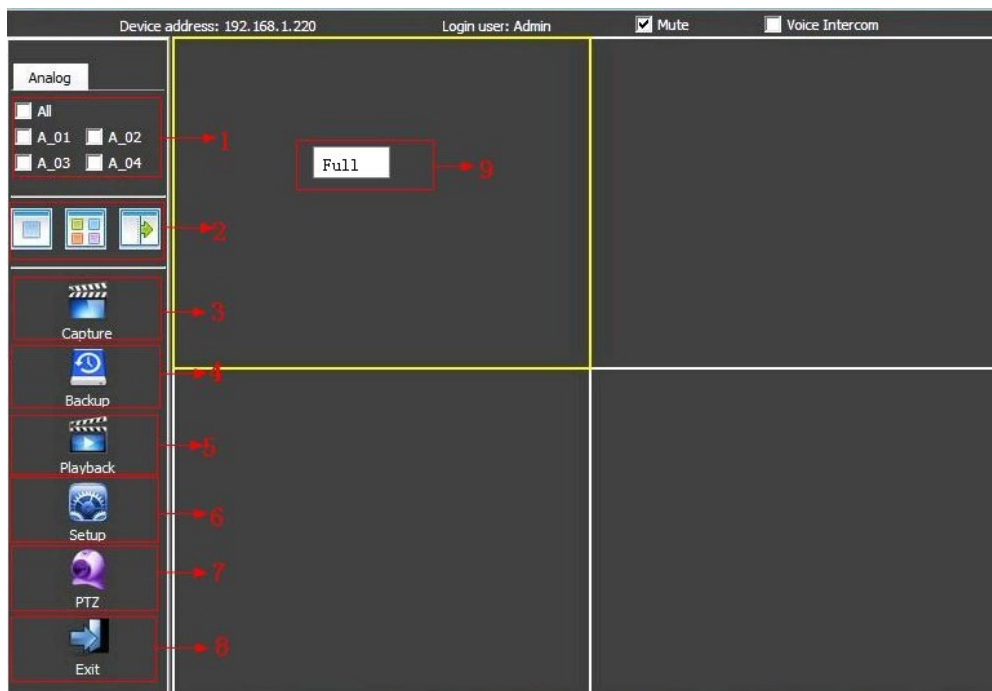

1.2 IE Main Screen

Following is the DVR/IPC/NVR main window after login successfully.

- Display current DVR/IPC/NVR IP address/User on the top, and **Mute function** for audio from DVR/IPC/NVR current channel(green frame)
- Display current login user account name on the top
- Camera screen , it can display 4ch or 9ch or 16ch multi channels screen.

2.Function Toolbar

1.Channel : Channel selection

2.Multi Screen : Click follow icon can switch to different multi window mode.

3.Capture : Click the icon to enter the camera

4.Backup : Click the icon to enter the backup function

5.Playback : Click the icon to enter the playback function

6.Device : Click the icon to setting function

7.PTZ : Click the icon to PTZ function

8.Exit : Click the icon to exit IE image

9.Full : Right click on the channel to put IE browser window to full screen and click again back to normal screen

Note :

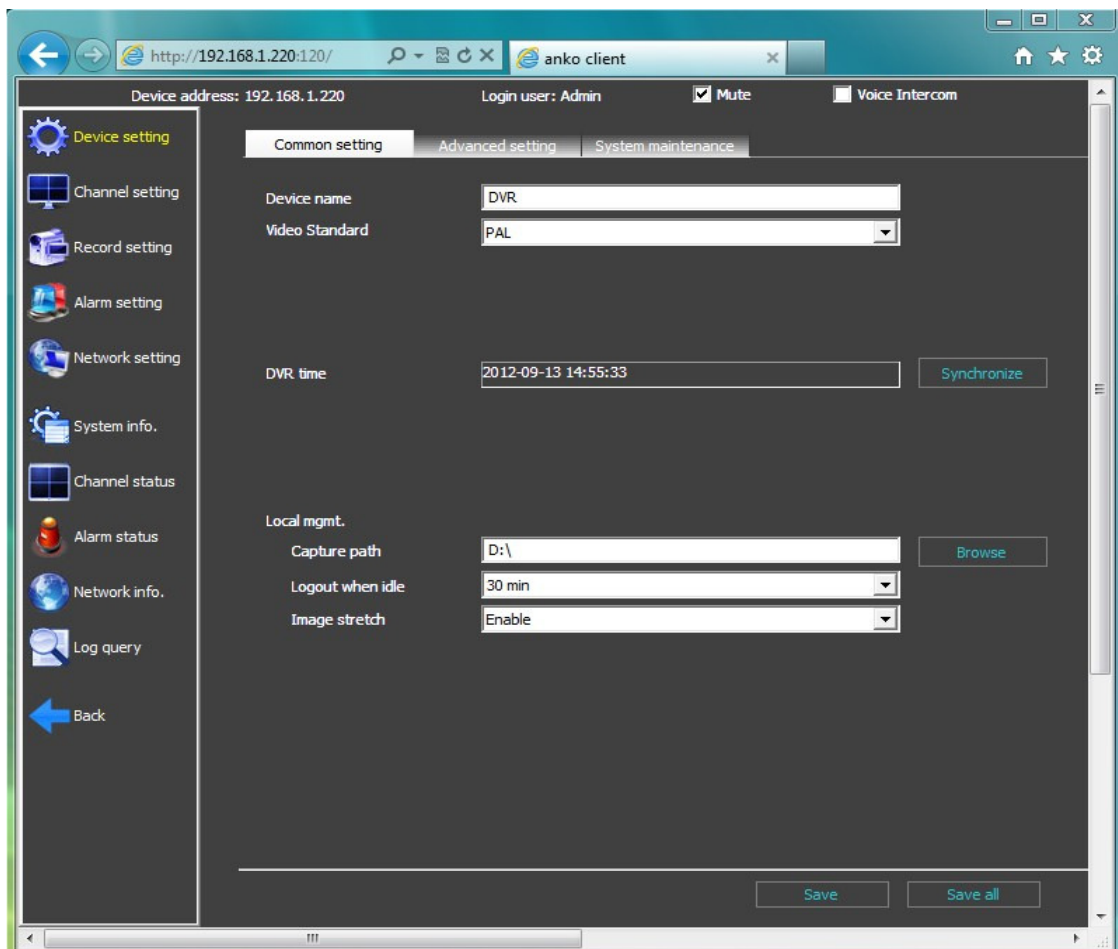

when switch to full screen mode, the Toolbar will automatic re-arrange position upon monitor display ration 4:3 or 16:9

3.Function Setting

: Click this icon to open DVR/IPC/NVR setting window.

3.1 Device Setting

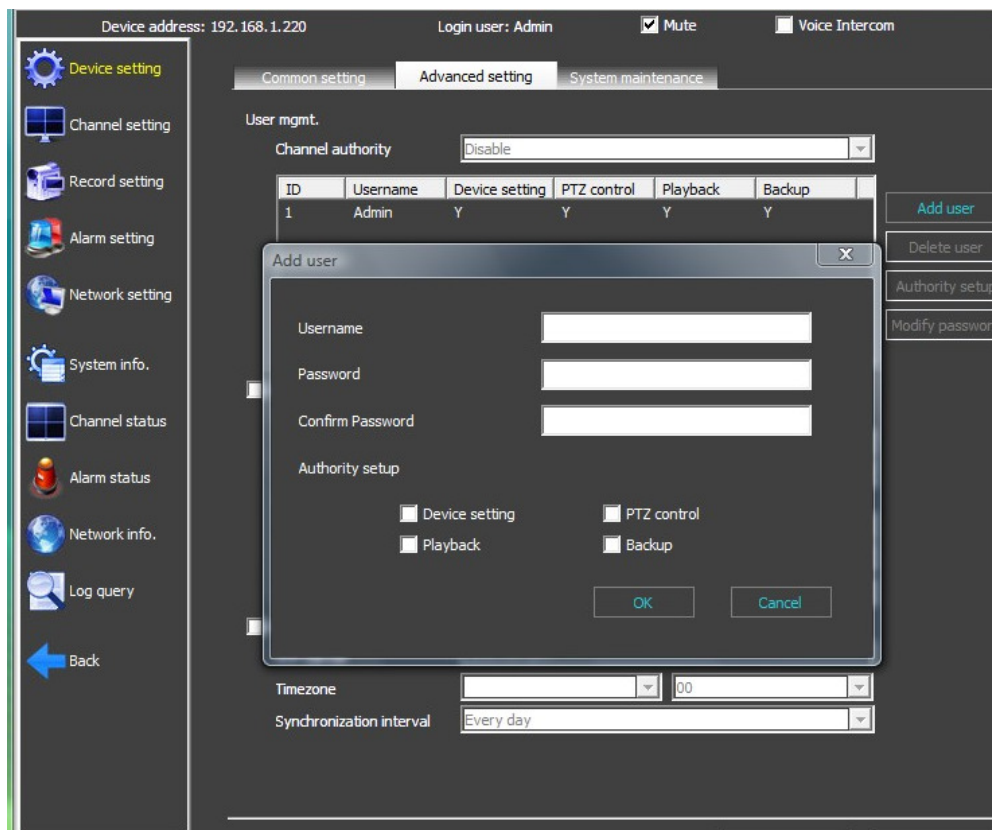

■ **Device name & Video format :**

Give this DVR/IPC/NVR a name and Video format(NTSC or PAL)

■ **Add account :**

Click to create new user account.

➤ 『Add user』 : Click this icon to open add user image :

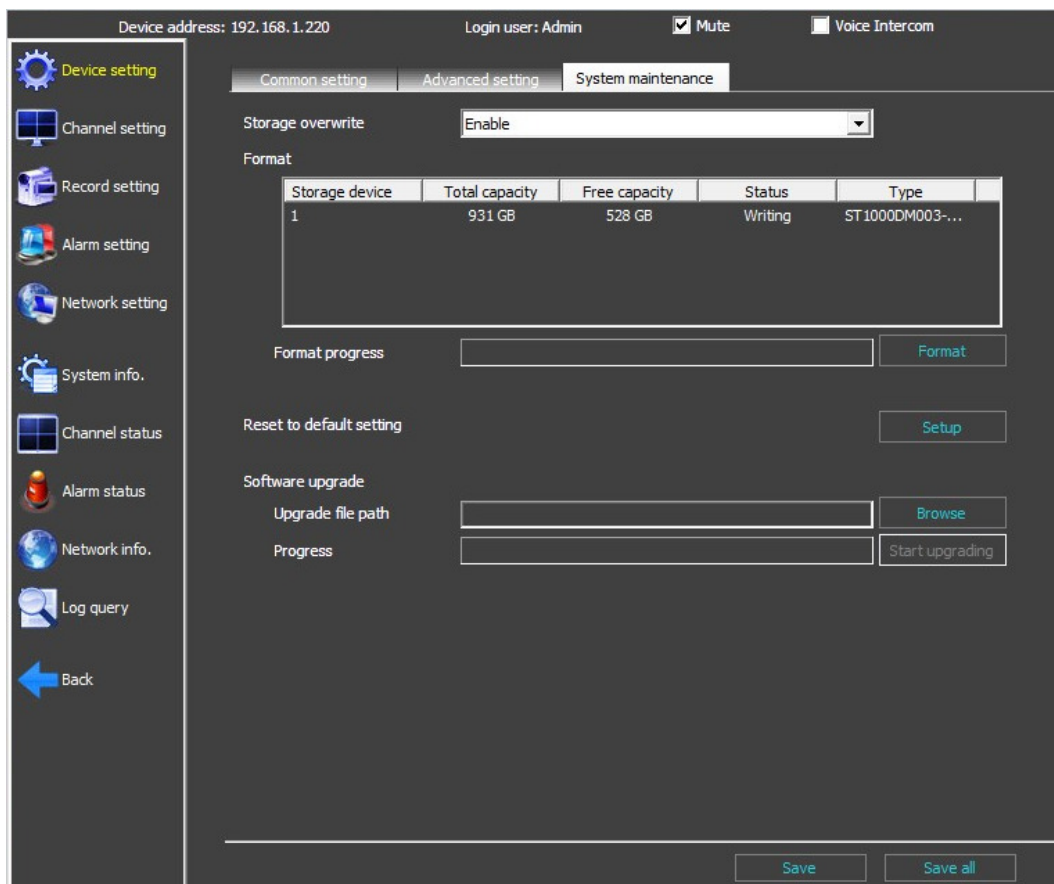

- ✧ User name : Input new user account name
- ✧ Input password : password
- ✧ Confirm password : confirm password again
- ✧ Authority setup : Click ☐ icon to enable or disable authority operation of certain user

Note :

Only user account can modify its own password after create that user account and password by admin

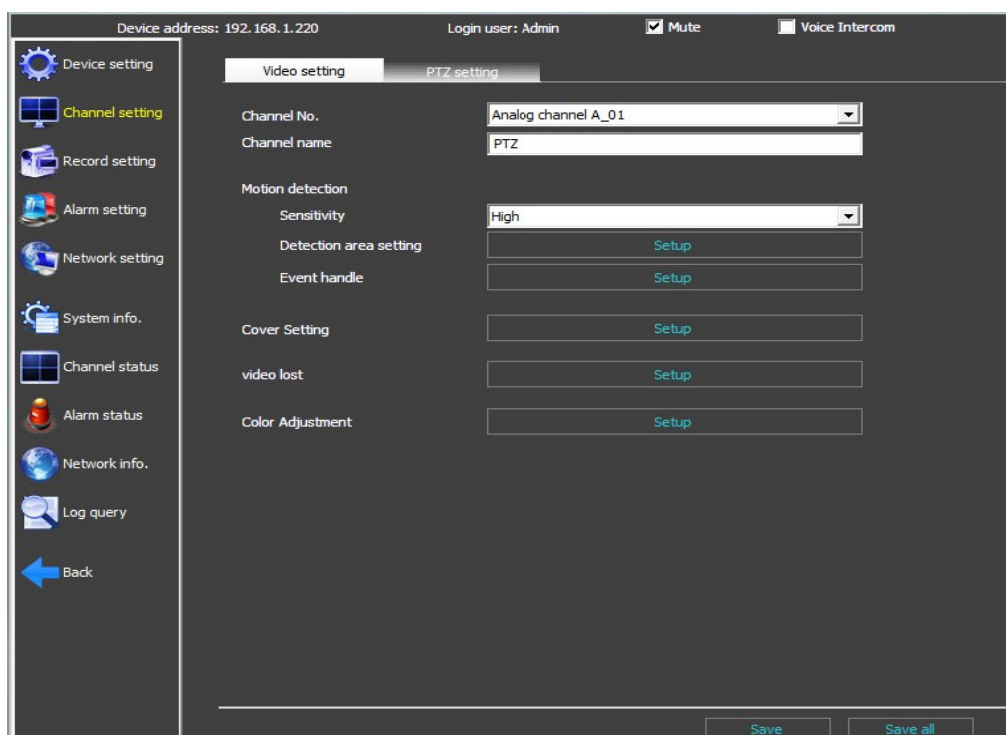

- 『 **Delete account** 』 : Delete curtain user account
- **DVR/IPC/NVR time** : Synchronize remote DVR/IPC/NVR system time with local PC time.
- **Software Upgrade** : DVR/IPC/NVR firmware can upgrade via network. Click “BROWSE” to find the firmware in PC, click “START UPGRADE” to upload new firmware to remote DVR/IPC/NVR. PROGRESS will show the upgrade status.
- **Reset to default setting** : click 『 Setup 』 to open new image :

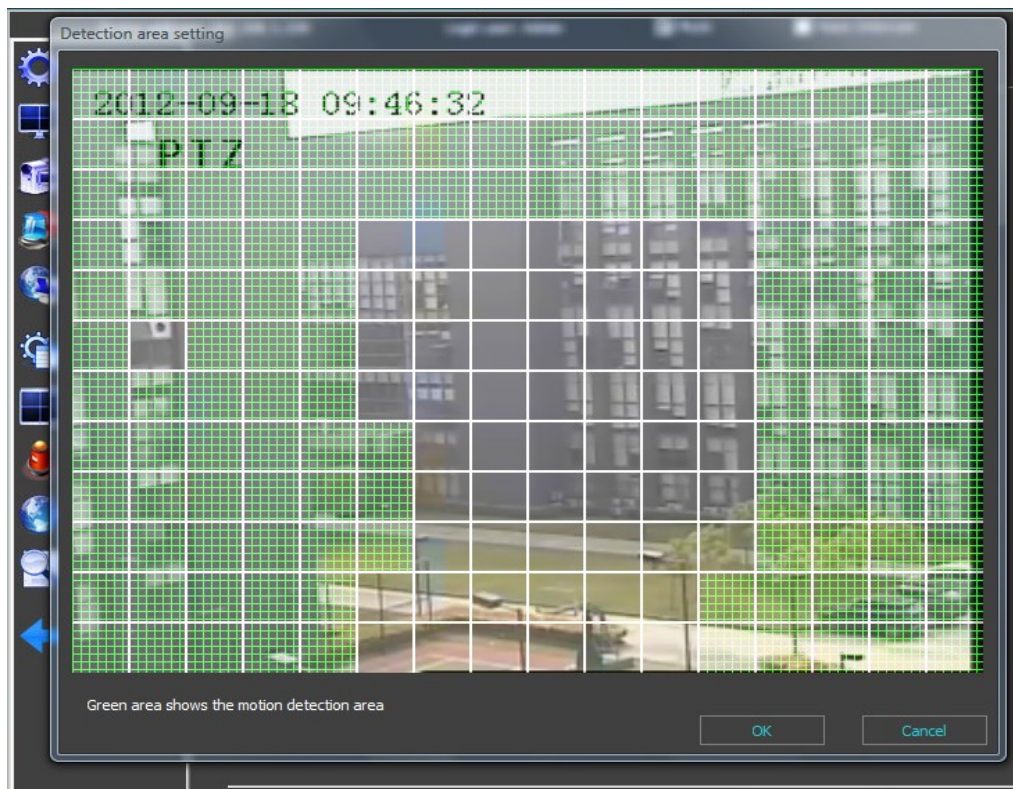

■ **HDD overwrite** : click the  select the Enable or Disable

■ **Capture path** : set up the folder to save snap shot 

3.2 Channel Setting

- **Channel No.** : Click ▼ icon to select channel number to apply setting.
- **Channel name** : Input name or description of camera
- **PTZ setup** :
 - Baud Rate : Click ▼ icon to select PTZ baud rate from 1200 /2400 /4800/9600bps
 - Protocol : Click ▼ icon to select PTZ protocol from 『SAMSUNG、PelcoD、PelcoP、Panasonic』
 - PTZ Speed : Click ▼ icon to select camera speed from 01~16. Bigger value mean camera move fast.
 - PTZ ID : PTZ camera ID address. Please check ID address from camera.
- **Motion detect** : Click ☐ to enable or disable function.
 - ☒ Mean motion detection enabled.

- **SENSITIVITY** : Click ▼ icon to selects from [Low, Middle, High, and Highest]
 Area set: Click 『Set Up』 to open sub window and configure motion area block by block. Left Click to change state, blue color means enable motion detection. Transparent color mean disable.
- **EVENT HANDLE** :
 - Trigger record channel: when curtain channel has motion triggered, DVR/IPC/NVR can record multiple channels.
 - Trigger alarm output: Enable or disable alarm output when motion triggered.
 - Sound alarm: Enable buzzer output when motion triggered.
 - Email notify: Enable or disable email sending when motion triggered

3.3 Record Setting

8. Active Control

8.1 Enable Download Un-signed Active Control if Necessary

User's computer need download ActiveX components for web access at the first time connect to DVR/IPC/NVR. If user's Internet explorer prohibits the download action(the DVR/IPC/NVR software is unsigned) then please manually enable the download of un-signed ActiveX in IE.

Download unsigned ActiveX controls → Enable or Prompt
Initialized and script ActiveX controls not marked as safe → Enable or Prompt

8.2 Turn off UAC for Windows 7 and Vista

To prevent unexpected troubles by ruing IE or CMS, we strongly suggest to disable UAC(User Account Control) for Windows 7 and Vista. To perform the following procedure, you must be able to log on with or provide the credentials of a member of the local **Administrators** group.

Important

Turning off UAC reduces the security of your computer and may expose you to increased risk from malicious software. We do not recommend leaving UAC disabled.

To turn off UAC

1. Click **Start**, and then click **Control Panel**.
2. In **Control Panel**, click **User Accounts**.
3. In the **User Accounts** window, click **User Accounts**.
4. In the **User Accounts** tasks window, click **Turn User Account Control on or off**.
5. If UAC is currently configured in Admin Approval Mode, the **User Account Control** message appears. Click **Continue**.
6. Clear the **Use User Account Control (UAC) to help protect your computer** check box, and then click **OK**.
7. Click **Restart Now** to apply the change right away, or click **Restart Later** and close the **User Accounts** tasks window.
